

Our security solutions for your business

OFFENSIVE SECURITY

Is my Company Safe?

We simulate an attacker's malicious behaviour in order to demonstrate the possible impact of a real attack, to identify potential attack vectors and targets, and to detect vulnerabilities, or information, and critical assets that may be at risk.

CYBER DEFENSE

How Can I Protect my Business?

We reduce the attack surface and, therefore, the number of potential successful cyber-attacks, while improving the detection capacity of any anomaly and restricting lateral movements in possible attacker incursions.

FORENSICS (DFIR)

What has Happened in my Company?

If you are the victim of an attack, we help you to contain potential incidents in time and to analyse and take the necessary security measures so that they do not happen again. In addition, we have extensive experience in forensic procedures in civil and criminal cases.

INTELLIGENCE

What is said about my Company on the Internet?

We research information about your company's digital footprint and what is said about it on the Internet. We analyse what is happening within your organization and protect your critical assets. In addition, we help you in the investigation of any type of physical or digital incident.

PROPERTY SECURITY

Which are the Risks for my Company?

We mitigate the risk of assets and key personnel of the organization, ensuring business continuity. We prevent, contain, and respond to different threats related to organized crime, unfair competition and insider threats.

GOVERNANCE, RISK and COMPLIANCE (GRC)

Does my Company meet Regulatory Requirements?

We align your business objectives with the risks arising from your activity and with compliance with applicable legal and regulatory requirements. We manage performance, risk and CSR with tailored strategies and procedures.

About us

We are a European business group specialising in Cybersecurity, Intelligence and Corporate and Property Security. Our main mission is to become your partner on the road to safety, always seeking excellence. We keep up to date with all current threats and have the capacity to face a joint and forceful response to any security problem (either physical or virtual), with specialized resources to address any project in terms of Prevention, Detection and Response.
